

My Favourite Product: EXCALIDRAW (Yes, I made this slide with it)

What is it?

A simple Collaborative online sketching tool

Who uses it?

Designers, developers, teams, educators

How they make "\$\$\$\$"

Subscriptions for premium features like workspaces, presentation etc

Excalidraw's JTBD:

"When I need to turn an abstract idea into a quick visual to communicate or collaborate,

I want a tool that feels like sketching on paper fast, frictionless, and shareable

so that I can move ideas forward without design overhead.

Notable Product Decisions

1) The Whiteboard Tool is open source and completely free. Anyone can access the tool at "excalidraw.com" or self host and integrate Excalidraw to their own tools

PM Insight: Reduces friction → users experience value ("aha moment") within 10 seconds. You can create, draw, and even collaborate without an account.

2) The look of the tool is unique and unconventional. It emphasizes on handwritten fonts and introduces features like levels of sloppiness in its sketches to get a hand drawn feeling

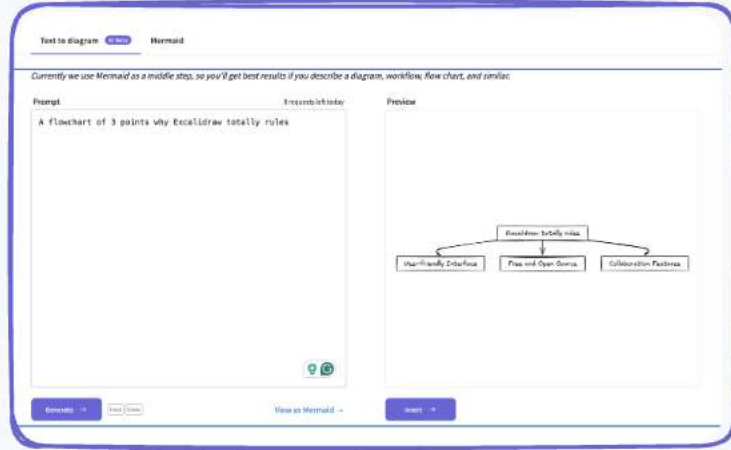

Sloppiness

3) Minimalistic Design and limited feature

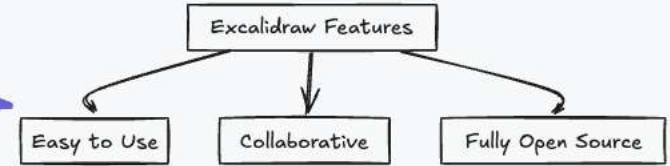

PM Insight: Reduces Decision Fatigue. Very low learning curve
Clear differentiation: "instant sketching tool" not "feature heavy like Canva or Miro suite."

My Favourite Feature: Text to Image Feature (To generate simple flowcharts with AI)

A Simple flowchart
of 3 points why
Excalidraw totally
rules

(Prompt)

(Generated Chart using AI in 3 secs)

Product Suggestions

- 1) The Current whiteboard is infinite and dimensionless. It becomes difficult to use the Canvas to design for a specific dimension. (LinkedIn Posts or Presentations). We can solve this by introducing an option to select dimensions for the Canvas
- 2) Excalidraw currently allows export only in PNG Format. A pdf format will help in ease of sharing a design.
